Evening Brief

Date Stamp: Sunday July 17, 2017

Weather Summary

Weather:

Gusty winds are expected again Tuesday across western Nevada, though speeds will diminish somewhat...mainly 20-30 mph. Highest winds will be along the Sierra Front. As the dry air continues its eastward progression Tuesday, storm activity will be confined to far southeastern Utah and the eastern portion of the Arizona strip.

Models suggest that moisture will surge northward into the far southern end of the Great Basin on Wednesday and continue to march northward through late this coming week, bringing a return of more widespread afternoon thunderstorm activity.

A cold front will push across our northern areas (Mtns of Central ID) late Wed into Thursday. Will evaluate for potential of "High Risk" for gusty winds in some of those areas.

Preparedness Levels

Current:

Great Basin	4
National	4

Great Basin Fire Activity (from Irwin): Moderate Activity

New Fires and Acres: 31 fires for 13,554 acres. 25,877 acres large fire growth.

Resources:

- Crews: 20 T1 IHCs in GB: all committed.
 - T2 IMT (NWCC) – Goff is committed to Four Seasons Complex.
 - T2 IMT Team 3 – Rohrer committed to Draw Fire, closeout Monday 7-18.
 - T2 IMT Team 4 – Roide en-route to Missouri Fire
 - T2 IMT Team 5 - Bird en-route to Oil Well Fire
 - T3 IMT Team 3 - Uhlig committed to MM155 fire.
 - Local IA resources are at drawdown for UT and NV.
 - GBCC has committed an estimated 120+ type 3, 4, 6 engines.
 - 0-T1 and 0-T2 helicopters are available in GACC.
-

Great Basin Fire Potential Summary

Fuels/Fire Behavior:

Fuels continue to moisten across southern and eastern UT, the AZ Strip and parts of Srn NV with the recent trend towards wetter showers and thunderstorms in those areas. ERC's are on the downward trend over these areas, especially UT and the AZ Strip with a more gradual decline over southern NV.

Fine fuels, which have been the main contributor to fire spread early this season in the north and west, remain dry across the northern and western areas of the Great Basin with continued hot and dry weather. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs continue to increase and are above the 80th percentile in many areas. The mountains of Central Idaho have seen the most rapid drying of fuels with ERC's also approaching the 80th percentile. Ignitions and small fires have increased recently there, and continued dry conditions suggest that large fire activity is not far away.
